TITLE OF INVENTION: Production of antibodies or (functionalized)
TITLE OF INVENTION: Cragments thereof derived from heavy chain immunoglobulins
TITLE OF INVENTION: of Camelidae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        APPLICANT:
TITLE OF INVENTION: Interleukin-5 specific recombinant antibodies
NUBBER OF SEQUENCES: 28
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 123; DB 2; Length 26; 100.0%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 231,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 17, Application US/09855271

| Sequence 17, Application US/09855271
| Patent No. US20020042089A1
| GENERAL INFORMATION:
| APPLICANT: Briman. Mark W
| APPLICANT: Briman. Diljeet Singh
| APPLICANT: Emtage, John Spencer
| TITLE OF INVENTION: Interleukin.5 Specific Recombinant Antibodies
| FILE REFERENCE: CARP-0088
| CURRENT PILING DATE: 2001-05-15
| PRIOR APPLICATION NUMBER: 09/347,061
| WUMBER OF SEQ ID NOS: 28
| SOFTWARE: Patentin version 3.1
| SEQ ID NO 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 123; DB 5; Length 26; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 124, Application US/08488113B
Sequence 124, Application US/08488113B
Patent No. 5744580
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Setter, Marc D.
APPLICANT: Studnika, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating
TITLE OF INVENTION: Proteins
NUMBER OF SEQUENCES: 169
CORRESPONDENCE ADDRESS:
ADDRESSES: McAndrews, Held & Malloy, Ltd.
STREET: 500 West Madison Street, 34th floor
Sequence 126, Application US/08425336
Patent No. 5621083
GENERAL INFORMATION:
APPLICANT: Better, Marc D.
APPLICANT: Studnika, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribsome-Inactivating TITLE OF INVENTION: Proceins
NUMBER OF SEQUENCES: 140
CORRESPONDENCE ADDRESS:

US-08-107-669D-28
Sequence 28, Application US/08107669D
Patent No. 576686
GENERAL INFORMATION:
INFORMATION:
APPLICANT: Studnicka, Cary M.
TITLE OF INVENTION: Modified Antibody Variable Domains (as amended)
MUMBER OF SEQUENCES:
ADDRESSER: Sterne, Kessler, Goldstein and Pox P.L.L.C.
STREET: 1100 New York Ave., N.W., Suite 600
CITY: Washington
STATE: D.C.
COUNTRY: United States of America
ZIP: 20005-3934
ZIP: 20005-3934
COMPUTER READABLE FORM:
MEDIUM TYPE: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARR: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/107,669D
FILING DATE: 13-AUG-1993
CLASSIFICATION NUMBER: BC-1993
FILING DATE: 14-DEC-1993
FILING DATE: 13-DEC-1991

WPI; 1998-568337/48.

New humanised antibody with affinity for vascular endothelial growth factor - for treatment of tumours, retinal disease and other anglogenic states, also related nucleic acid, vectors and transformed cells.

Example 3; Page 74; 100pp; English.

(anti-VEGF) antibody variants from Pab-phage library HL-265. The sequences are used in the course of the invention to produce the humanised anti-VEGF antibody of the invention to produce the humanised anti-VEGF antibody of the invention. The humanised anti-VEGF antibody of the invention. The humanised antibodies are used to inhibit VEGF-induced angiogenesis, particularly for treating or preventing tumours (of any type) and retinal disorders (e.g. ageuslated mecular degeneration or diabetic retinopathy). They can also be used to treat other conditions that involve angiogenesis, e.g. rheumatoid arthritis, psoriasis, atherosclerosis, Grave's disease, etc

```
The present invention relates to humanised anti-VEGF (vascular anti-VEGF antichelal growth factor) antibodies or a variant of a parent anti-VEGF antibody, which binds human VEGF. The anti-VEGF antibodies are useful for inhibiting VEGF-induced angiogenesis in a mammal (particularly a human), particularly those having a tumour or a retinal disorder e.g. intraccular neovascular disorders. The present sequence is a peptide fragment of an anti-VEGF variant from a second generation Fab-phage library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New humanized anti-VEGF (vascular endothelial growth factor) antibodies or their variants, useful for inhibiting VEGF-induced angiogenesis in a mammal, particularly for treating tumor or retinal disorders.
                                                                                                                                                                         Cytostatic; ophthalmological; humanised; antibody; anti-VEGF; VEGF; vascular endothelial growth factor; angiogenesis inhibitor; tumour; retinal disorder; intraocular neovascular disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic; ophthalmological; humanised; antibody; anti-VEGF; VEGF; vascular endothelial growth factor; angiogenesis inhibitor; tumour; retinal disorder; intraocular neovascular disorder; heavy chain; variable domain; CDRHI.
